

## RouteMan Meets TomTom® GPS Navigation

Volume 5, Issue 1  
February 2007

Software Advantage, Inc. is announcing the availability of the RouteMan Navigator Feature. This feature allows Pocket Route Release 4.0 to interface with the popular Tom Tom Navigator 6 software. TomTom Navigator provides the user with maps of all streets and roads across the USA and Canada as well as many foreign countries displayed on the PDA. TomTom, when combined with a GPS receiver, gives turn by turn directions from your current location to your destination.

With the new RouteMan Navigator Feature, handhelds equipped with TomTom, can give drivers directions to their next stop. With the tap of one button, RouteMan displays the map or begins turn by turn directions to the selected cus-

tomers' address. One button brings the user back to RouteMan so that orders can be entered and printed.

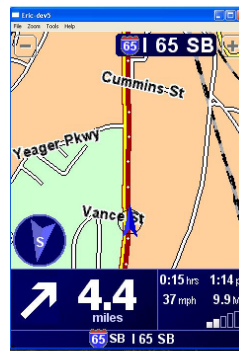

The RouteMan Navigator Feature is a valuable tool for new drivers or experienced drivers running unfamiliar routes. This is much faster than looking up addresses on a map or calling the office for directions to the next stop.

The RouteMan Navigator Feature requires that the handheld be loaded with the TomTom Navigator 6 software. (See [www.tomtom.com](http://www.tomtom.com) for details.) If turn by turn directions are desired, the truck must be equipped with a Bluetooth GPS receiver unit.

The RouteMan Navigator

Feature is an optional feature of Pocket Route Release 4.0.1.6. If you are interested in purchasing this feature, please call Software Advantage at 205-620-1610.

This feature is an example of how Software Advantage responds to customer requests and keeps RouteMan on the leading edge of technology.

## Holiday Ice Chooses RouteMan!

Our featured customer for this issue of IceNet is Holiday Ice Company headquartered in Syracuse, NY. Holiday Ice is a leading ice supplier in the upstate New York Area with 200 tons per day capacity.

Holiday was looking for a system to improve their

customer service and “eliminate manual tickets with sloppy handwriting, price errors and math errors.” They found the answer with RouteMan—Route Management System.

Read what Tony Barraco, Jr., VP has to say about

RouteMan in the attached profile.

## Intermec Rugged PDA's O'Neil Rugged Printers

Software Advantage, Inc. is pleased to introduce the Intermec line of rugged PDA's to their product line. Intermec devices are designed to be more rugged than the HP iPAQ/PP-55 handhelds. They are rated to withstand "multiple drops to concrete." These PDA's require a separate printer device such as the O'Neil 2t/4t. The O'Neil 2t/4t is also a rugged printer and comes in both Bluetooth and IR interfaces.

With this introduction,

RouteMan users have the choice of a rugged PDA/Printer or the popular and cost effective iPAQ/PP-55 device in either a 2.25 or 4 inch receipt. RouteMan also supports the Canon i90 Mobile Printer for 8 1/2 X 11 inch receipts.

Software Advantage, Inc. is an authorized partner of Intermec, O'Neil and HP.

If you have a need for a rugged device, please call Software Advantage, Inc for more information and a price quote.

## PocketRoute 4.0 Available Now!!

Software Advantage, Inc. announces the availability of Pocket Route 4.0. This new release provides increased speed of operation as well as several improvements in usability. The time to sync a handheld to the PC is reduced by 75%!! Pocket Route 4.0 devices can be mixed with the older Pocket Route 3.0 devices in a single installation.

Release 4.0 also provides the ability for Pocket Route to run on Windows Mobile devices with smaller screen

sizes such as the new Pocket PC Phones.

Release 4.0 is the base release for adding the new RouteMan Navigator Feature. See page 1 for details.

Pocket Route 4.0 runs on all Pocket PC 2003, 2003SE, and Windows Mobile 5.0 operating systems. The new release is available to all RouteMan customers with a current Support Agreement at no charge.

## Managed Anti-Virus Solution

We recently found a good way to keep virus protection up-to-date. It is by using a Managed Anti-Virus Solution from U. S. Teks.

The Managed Anti-Virus Solution provides:

- 24/7 Virus Monitoring (Remotely via Internet).
- Easy to read high level monthly virus reports. sent via email (Know the virus activity and update status of all your machines).

- Email notification when a virus has reached medium or high risk.

- Virus software updates when available from McAfee.

You can contact real people, not menus on the other end of the phone, and U. S. Teks

is not overseas. Hands off approach, everything is done for you.

U.S. Teks will guarantee that if your computers get attacked by a virus, they will clean the virus from your computer and make every effort possible to retrieve your data, if data is lost.

If you would like more information about how the Managed Anti-Virus Solution can work at your company, give us a call at Software Advantage Inc. and we will refer you to U.S. Teks or visit their website at:

[www.usteks.com](http://www.usteks.com).
